

AMERICAN INTERNATIONAL UNIVERSITY BANGLADESH (AIUB)

Faculty of Science and Technology (FST)

Department of Computer Science (CS)

Course: Web Technologies (Lab Exam)

Instruction:

1. Complete the task

2. After completion, push the code in the GitHub repository.

Task Requirements:

Scenario: A premier international tech community, "Global Tech Connect," organizes regular workshops, webinars, and networking events for professionals and enthusiasts. They need a streamlined system for their event pages to handle attendee registrations and provide live insights.

Event Registration Form Implementation:

Create a comprehensive registration form on each event page with the following features:

Registration Form Design:

- Create a visually appealing and organized registration section.
- Design the form with proper labels, input fields, and a clear call-to-action button.
- Include real-time validation for all user inputs.

Registration Form Fields & Validation:

- **Full Name Field (Required)**
 - Minimum 6 characters.
 - Maximum 100 characters.
 - Prevent empty submissions.
 - Validation error message: "Name must be between 6 and 100 characters."
- **Professional Email Field (Required)**
 - Must be a valid email format (contain @ and a domain).
 - Validation error message: "Please enter a valid professional email address."

- **Company/Institution Field (Optional)**
 - Maximum 100 characters.
 - No validation error needed if left blank.
- **Attendance Type (Required)**
 - Radio button selection: "Virtual" or "In-Person".
 - Prevent submission if no option is selected.
 - Validation error message: "Please select your attendance type."

Dynamic Statistics Display:

- Include a button labeled "Show Event Analytics".
- **When clicked, this button should:**
 - Reveal a statistics panel showing:
 - Total Number of Registrants
 - Attendance Breakdown (a count of how many people selected "Virtual" vs. "In-Person")
 - The button text should change to "**Hide Event Analytics**".
- Clicking the "**Hide Event Analytics**" button should conceal the statistics panel and revert the button text to "**Show Event Analytics**".

Note: Since we are not using databases or local storage, all comments and ratings should be maintained in JavaScript arrays/objects during the browsing session.
